# NinjaOne + SentinelOne

Protect, detect, remediate, and hunt threats with SentinelOne Singularity Control or Singularity Complete, integrated with NinjaOne.

ninjaOne®

NinjaOne's integration with SentinelOne offers IT Teams:

- Threat alert icons immediately displayed in the NinjaOne and device dashboards
- One-click access to the SentinelOne console
- Concierge migration and onboarding
- Automated installation and monitoring to ensure agent is always on device
- Mapping of NinjaOne organizations to SentinelOne sites to match endpoints between solutions

SentinelOne Comprehensive Endpoint Protection

With NinjaOne and SentinelOne, IT Teams can choose the protection that is right for their individual clients or specific endpoints.

SentinelOne Singularity Control helps IT Teams manage their attack surface by offering secure control over network flows, USB and Bluetooth device access, and the ability to find "rogue" unprotected devices.

- Control in-and-outbound network traffic for Windows, macOS, and Linux
- Automated location awareness dynamically assigns network controls
- Harden endpoints by controlling USB and Bluetooth device type access

SentinelOne Singularity Complete adds Endpoint Detection and Response (EDR) and threat hunting capabilities enabling IT technicians to take action in real time and achieve greater cross-surface visibility to endpoint, cloud, and identity. Complete includes all the capabilities in Singularity Control as well as:

- Next Generation Antivirus (NGAV) and enterprise-grade EDR
- One-click remediation
- SentinelOne Storyline™ technology provides real time machine-built context and correlation,
- Identify unprotected endpoints with enterprise-wide passive and active network sweeps
- Hierarchical policy setting (similar to NinjaOne for easier set up of protection policy standards

NinjaOne offers other SentinelOne security products including:

SentinelOne Vigilance Respond - a global Managed Detection and Response (MDR) service. Vigilance Respond utilizes SentinelOne's in-house experts to provide 24 x 7 global threat monitoring so your technicians can get on with other work.

SentinelOne Ranger - discovers and recovers unsecured endpoints with configurable, automated peer-to-peer agent deployment to quickly plug gaps in your attack surface.

SentinelOne Ranger Insights - is a network discovery and vulnerability management solution that prioritizes risk to your enterprise attack surface by offering real time detection of vulnerabilities across OS and prioritizes their criticality.

This NinjaOne + SentinelOne integration provides IT Teams powerful protection and comprehensive endpoint control from one centralized view.

Why NinjaOne?

Over 13,000 MSP and IT department organizations trust NinjaOne to provide centralized visibility and control over all devices helping them monitor, manage, and secure their endpoints at scale.
